Industrial issue

- ▶ EDF uses 0D/1D system models programmed in Modelica as decision support for the conception and operation of its industrial assets.
- ▶ How to apply OpenTURNS' panoply of methods to these models?

“Regular” models vs 0D/1D system models

“Regular”
modelling

“Packing”

$$\begin{cases} \dot{\mathbf{x}}(t) = f(\mathbf{x}(t), \mathbf{u}(t), t) \\ \mathbf{y}(t) = g(\mathbf{x}(t), \mathbf{u}(t), t) \end{cases}$$

Equation formulation

Tools

Modelica, Simulink...

Modelica programming language

- ▶ Modelica is an open language for programming models based on **differential algebraic systems of equations**

- ▶ Equations are written in almost **natural language**, and solved by a multipurpose third party tool.
- ▶ It is object-oriented: available **module libraries** cover most applications
 - ▶ Complex models can be achieved simply by combining this modules using a graphical interface!

Modelica tools

- ▶ Main tools :
 - ▶ Dymola (Dassault Systèmes, proprietary)
 - ▶ OpenModelica (Open Source Modelica Consortium, open source)

- ▶ Functions
 - ▶ Flatten equation systems
 - ▶ Compile to machine code after including a solver
 - ▶ Development environment
 - ▶ Model graphical interface
 - ▶ Basic post-processing...

OpenModelica, model graphical view

Piloting models

- ▶ Most OpenTURNS methods apply to functional **black boxes**
 - ▶ Uncertainty propagation and reliability analysis
 - ▶ Sensitivity analysis
 - ▶ Emulation
 - ▶ Parameter estimation

- ▶ We need efficient **input-output data interfaces**,
a.k.a. *wrappers* in OpenTURNS jargon.

Functional mock-up interface (FMI)

- ▶ FMI is a standard for input–output data interface for numerical model.

- ▶ A **functional mock-up unit (FMU)** is a black box following the standard.

OtFMI: integrating FMI support into OpenTURNS

- ▶ The new open source module OtFMI allows transparent use of FMU with OpenTURNS methods.
- ▶ It provides high level classes derived from `ot.PythonFunction`: running an FMU instead of a Python function only requires to **change a single code line!**

```
import otfmi
otfmi.FMUFunction("path/to/fmu",
                  inputs_fmu=["x_1", "x_2", "x_3"],
                  outputs_fmu=["y"])
```

Implementation overview

OtFMI graphical interface

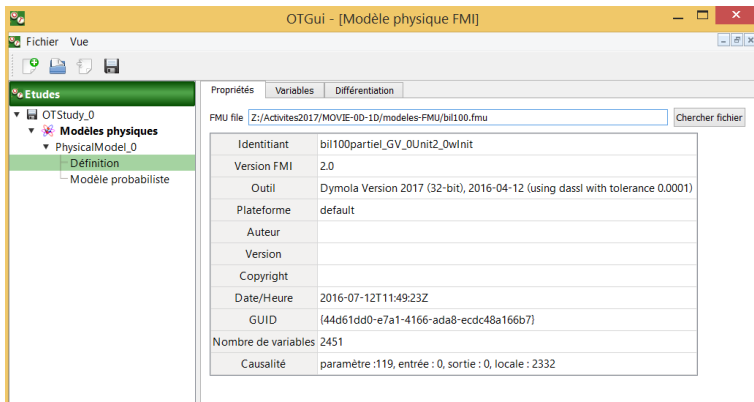

Motivations

- ▶ Provide access to OpenTURNS' methods for Modelica users unfamiliar with Python
- ▶ Considerably ease simple studies

Issues

- ▶ Modelica models often define **hundreds or thousands of variables**

OtFMI graphical interface, FMU overview

OtFMI graphical interface, picking inputs and outputs

The screenshot shows the OtGui application window titled "OtGui - [Modèle physique FMI]". The interface includes a menu bar (Fichier, Vue), a toolbar, and a project tree on the left. The project tree shows a hierarchy: "Etudes" > "OTStudy_0" > "Modèles physiques" > "PhysicalModel_0" > "Définition" > "Modèle probabiliste".

The main window has three tabs: "Propriétés", "Variables", and "Différentiation". The "Variables" tab is selected. It contains a "Filtres" section with dropdowns for "Nom", "Case", "Variabilité", "Causalité", and "E/S", along with an "Effacer" button. Below this is a list of variables: rho, GV1_CFD1, GV2_CFD1, GV3_CFD1, GV4_CFD1, VVP_1A_VAPF, VVP_2A_VAPF, VVP_3A_VAPF, VVP_4A_VAPF, and D8_GV1_CFD1.

At the bottom of the "Variables" tab is a table with the following columns: Nom, Description, Variabilité, Causalité, E/S, and Valeur.

Nom	Description	Variabilité	Causalité	E/S	Valeur
QARE0		Fixe	Paramètre	Entrée	2126,272222
PARE0		Fixe	Paramètre	Entrée	7032780
TARE0		Fixe	Paramètre	Entrée	499,9305
PGCT0		Fixe	Paramètre	Entrée	6540000
QGSS0		Fixe	Paramètre	Entrée	183,4088889
QGRE0		Fixe	Paramètre	Entrée	1922,635556
BIL100...		Fixe	Locale	Sortie	3788204475

Below the table, it says "Variables sélectionnées : entrée : 6, sortie : 1". There is an "Evaluer" button at the bottom right of the table area.

Perspectives

- ▶ Most 0D/1D system model are dynamical.
We need methods for sensitivity analysis and emulation of model with **time series inputs or outputs**.
- ▶ EDF is interested into **data assimilation** with its Modelica models.
- ▶ What are the opportunities of **extending the Modelica language** to support stochastic description of variables?

Thank you for your attention.
